BIOLOGICAL SCIENCES PROGRAM

DEGREE OFFERED

Bachelor of Science (Biological Sciences)

B.Sc. (Biological Sciences)

Biological Sciences program offers 3 modules:

1. Biomedical Science Module
2. Ecology and Conservation Module
3. Biotechnology Module

THE FIELD

The Biological Sciences Program at MUIC provides you clear learning objectives and outcomes and also unrivalled flexibility to design a personalized plan to explore your interests as they develop. Whether you are freshly graduated from high school or seeking inspiration for a career change, we can provide the knowledge and skills you need for success.

Core courses give you an excellent foundation in theoretical and practical elements as you examine the fundamental principles driving life processes. Major classes focus on the molecular connections between the environment and the cell throughout the domains of life and are designed to equip you with technical and transferable skills such as teamwork; ethical data collection; statistical analysis; and rigorous and logical interpretation and communication of results.

I-Design classes allow you to expand your academic interests by specialising in one of the Biological Science modules such as Biomedical Science or by undertaking a complementary minor in another discipline where you can broaden your skill set and improve your employment chances.

Our teaching is research and practice-driven providing you with opportunities to exercise your intellectual curiosity and to interact with stakeholders from multiple sectors giving you access to the tools and perspectives you need to develop your critical thinking skills. To demonstrate your ability to apply knowledge and skills in real-world settings you will pursue your own research tackling emergent challenges facing humanity and the rest of life on Earth.

Graduates of the Biological Sciences Program progress to higher degrees and professional qualifications such as in medicine or dentistry, or directly to employment in teaching; life sciences research and development; conservation and wildlife management; and the biotechnology and pharmaceutical industries.

CHEMISTRY PROGRAM

DEGREE OFFERED

Bachelor of Science (Chemistry)

B.Sc. (Chemistry)

TRACKS

The chemistry program offers three tracks.

- The first track is a Dual-Degree Program with Flinders University, Australia in a 2+2 arrangement, in which the student will receive B.Sc. in Forensic and Analytical Science.
- The second track is a B.Sc. (Chemistry) + M.Sc (Pharmacology) degrees in 4+1 arrangement with Faculty of Graduate Studies & Faculty of Medicine Siriraj Hospital.
- The third track is a degree in chemistry. For high achievers the completion of their Chemistry degree courses is possible at the end of their Junior year. Their I-Design courses in their senior year can be used to create a personalized education, leading to another minor or certificates.

THE FIELD

“Imagine a world of possibilities when you know its molecular framework.”

Chemistry is one of the most versatile branches of science. Chemistry is sometimes called “the central science”, because it provides an important connection between physical sciences with life sciences and applied sciences. The applications of chemistry reach far into the fields of food, energy, environment, material, medicine, and nanotechnology.

The Chemistry Program at Mahidol University International College reflects and is built upon the changes that have occurred in the discipline over the last few decades. Chemistry majors are taught with full rigor the essential and key subjects such as analytical chemistry, biochemistry, inorganic chemistry, organic chemistry, physical chemistry and senior project in chemistry.

The elective courses in the Chemistry Program offer the Chemistry students the opportunity to shape their own track of preferred courses after completing the core and required chemistry courses.

CAREER OPPORTUNITIES

Graduates of the international bachelor chemistry program can find employment in the following roles:

- Quality control or quality assurance positions or as a research scientist in local and multinational chemical, petrochemical, pharmaceutical manufacturing and related industries.

- Research assistant in private sector and governmental services department.
- Customer relations and as technical-support in sales and marketing team for local and international chemical, petrochemical, pharmaceutical and related companies
- Entrepreneurship in applied chemical and related industries.

Track selection process

Students in consultation with their academic advisor can nominate their track at any time during their study in the program. After three trimesters of study, the Program director of chemistry approves student's nominated track in consultation with the partners (Flinder University and Siriraj for the 2+2 and 4+1 tracks respectively). It is expected that high performing students (GPAX \geq 3.50 for Flinders and GPAX \geq 3.25 for Siriraj) will be able to choose any tracks of his/her choice. For other students, the default option is the main track. Students may need to pass additional interviews and/or demonstrate further evidence of their commitment towards 2+ 1 or 4+1 track to be approved.

COMPUTER ENGINEERING PROGRAM

DEGREE OFFERED

Bachelor of Engineering (Computer Engineering)

B.Eng. (Computer Engineering)

THE FIELD

Computer Engineering is defined as the discipline that embodies the science and technology of design, construction, implementation and maintenance of software and hardware components of modern computing systems and computer-controlled equipment. Computer engineering has traditionally been viewed as a combination of both computer science and electrical engineering. It has evolved over the past three decades as a separate, although intimately related, discipline. Computer engineering is solidly grounded in the theories and principles of computing, mathematics, science and engineering; it applies these theories and principles to solve technical problems through the design of computing hardware, software, networks and processes.

Technological advances and innovation continue to drive computer engineering. There is now a convergence of several established technologies (such as television, computer and networking technologies) resulting in widespread and ready access to information on an enormous scale. This has created many opportunities and challenges for computer engineers. This convergence of technologies and the associated innovation lie at the heart of economic development and the future of many organizations. The situation bodes well for a successful career in computer engineering.

CAREER OPPORTUNITIES

Increasingly, computer engineers are involved in the design of computer-based systems to address highly specialized and specific application needs. Computer engineers work in most industries, including the computer, aerospace, telecommunications, power production, manufacturing, defense and electronics industries. They design high-tech devices ranging from tiny microelectronic integrated-circuit chips to powerful systems that utilize those chips and efficient telecommunication systems that interconnect those systems. A wide array of complex technological systems, such as power generation and distribution systems and modern processing and manufacturing plants, rely on computer systems developed and designed by computer engineers.

I-Design Elective Courses

20 credits

The purpose of the I-Design electives is to promote multidisciplinary learning. Students are encouraged to explore courses offered by diverse disciplines across MUIC, Mahidol University, and partner institutions. The I- Design electives can be satisfied upon the completion of the following course categories:

1. Minor courses offered by any program in MUIC
2. Certificate courses offered by any program in MUIC
3. Any major courses offered by any program in MUIC
4. Any major courses offered in Mahidol University (including undergraduate and graduate level courses). Courses must be approved by the student's advisor and the Curriculum Administrative Committee.
5. Any major courses offered at partner institutions (who have MOU with Mahidol University and/or MUIC). Courses must be approved by the student's advisor and the Curriculum Administrative Committee.

Free Elective Courses

8 credits

Students can take any courses offered by MUIC and/or Mahidol University as free elective courses with the approval from the advisor. A course within the student's major that is too closely related or redundant to core/required/elective courses is discouraged and may be disapproved by an academic advisor.

COMPUTER SCIENCE PROGRAM

DEGREE OFFERED

Bachelor of Science (Computer Science)

B.Sc. (Computer Science)

THE FIELD

The science of computing is transforming the world at a breathtaking pace. Think self-driving cars, the Internet of Things (IoT), artificial brains, smartphones, among others. Think medical advances made possible by the sheer computation power and our newfound ability to gather and sift through massive amounts of data. In this age, this is the science that touches every life and drives every modern endeavor. Through hands-on projects and active learning activities, students in the program will be trained not only to make excellent use of the state-of-the-art technology but also to create and drive future technology. Our holistic approach to education ensures that the students have a solid understanding of the fundamentals, in the context of the present technology— capable of executing it in the real world. As a critical thinker with great communication skills, our students are well-prepared for the job market globally and for further education, whether they aspire to launch a new IT venture, develop a global-scale platform, be a leading researcher, or land a job at a tech giant.

The Computer Science curriculum brings together academic knowledge from diverse disciplines, cultivating in the students a problem-solving mindset in the spirit of liberal arts education. Furthermore, with the rise of big data, data science, and data-intensive applications, students may opt to specialize in Data Analytics & Software Engineering. This module trains the students to be specialists in working with and efficiently handling large and complex data, making them ideal hires for companies looking to build a data platform or extract value from a trove of data.

Because every student is different, each student has the freedom to customize his or her education plan from the beginning, with the expert help of the student's advisor. There are compelling options for both research- oriented and employment-oriented students: write a thesis after a year-long research training— or apprentice with our industry partner for up to 6 months, potentially securing a job offer right after.

CAREER OPPORTUNITIES

The Computer Science program prepares students for a multitude of career paths, including:

- Software developer/engineer capable of designing, implementing, and deploying solutions
- Data scientists and data platform engineers
- Further study in fields related to computing, including robotics and bioinformatics
- Owners of IT companies/startups
- Research and development in the commercial sector and in academia
- IT consultants and solution engineers, such as innovative agriculture and smart medicine
- Faculty position, teaching, or teaching assistant in the field of computing for academic institutions and international schools

Intercultural Studies and Languages Program

DEGREE OFFERED

Bachelor of Arts Program in Intercultural Studies and Languages (International Program)

B.A. Intercultural Studies and Languages (International Program)

CONCENTRATIONS

Intercultural Studies and Languages Program offers 3 concentrations:

1. Foreign Language and Culture Concentration (FLC)
2. Literary and Cultural Studies Concentration (LCS)
3. Ethics, Philosophy, and Economics Concentration (EPE)

THE FIELD

The Intercultural Studies Program provides an interdisciplinary and truly global approach to prepare students for a world in which they need to engage and interact in various cultural contexts. The program aims to be innovative in its design and responsive to today's rapidly changing world, while remaining faithful to the ideals of the liberal arts tradition, foremost of which is to promote good global citizenship by fostering cultural appreciation, multilingual proficiency, critical thinking skills, ethical leadership, and creative problem solving. This major brings together diverse aspects of a humanities/ liberal arts education: a broad range of methods, perspectives and challenges are explored in the areas of language, culture, and economics. In doing so, the program aims to foster the analytical and intuitive thinking skills, creativity, communicative facility and ethical awareness that prepare students to be future decision-makers and lifelong learners.

All students in the Intercultural Studies major study a common set of core courses designed to introduce them to theories and methodology in Intercultural Studies in addition to new fields and subfields of various related disciplines. Depending on their interests and abilities, students are encouraged to decide on one of three concentrations with close consultation with their advisor. Regular joint symposiums with faculty and students aim to develop a learning community that encourages knowledge creation and the exchange of ideas between students and instructors in the different orientations. In their final academic year, they are required to conduct research as part of an individual project or group seminar.

While developing competencies that are fundamental to all careers, the program will be of particular benefit to students preparing for graduate studies or further training in the field of humanities, such as in cultural studies, law, journalism, economics and politics. The strong interdisciplinary approach aims to widen students' intellectual abilities and analytical thinking so that they are competent decision-makers operating on a global sphere.

PHYSICS PROGRAM

DEGREE OFFERED

Bachelor of Science (Physics)

B.Sc. (Physics)

TRACKS

The Physics curriculum offers elective courses with strong focus on 2 tracks:

1. Astrophysics
2. Computational Physics

THE FIELD

Physics, one of the major basic sciences, essentially focuses on the elements of matter, their interaction, energy and applications. Physics plays a fundamental role both in the sciences and in the world of technology. It also provides the skills for dealing with all of the scientific concepts. An understanding of physics is also useful for students in social sciences and valuable for anyone interested in the full range of human culture. MUIC offers a Physics Major to produce graduates who are knowledgeable and highly qualified in this scientific discipline. There is a great demand for graduates in physics who can contribute to both national development in science and technology and international scientific advancement.

CAREER OPPORTUNITIES

1. Scientists in institutes or laboratories: You may have heard about NASA, CERN, LIGO. Physicists usually involve with almost all of cutting-edge technologies.
2. Physics instructors in international institutes: Nurture the young and brilliant minds to flourish. Since Physics is one of the fundamental subjects for any scientific disciplines, competent Physics instructors are always sought after.
3. Financial analysts: Physics and Wall Street? We can do mathematics, create a model, run simulations. Money and people behaviour are no stranger to us. Plenty of Physicists are working in Financial sectors.
4. Start-up Entrepreneurs: What do Elon Musk and Tony Stark have in commons? Ans: Physics Degree.
5. Consultants and developers at technology-based company: Here is a quote from Richard Feynman, a scientist in the Manhattan Project that developed an atomic bomb which arguably ended WWII, 1965 Physics Nobel Prize Laureate, and a beloved Physics professor at Caltech, *“At that time nobody knew what a physicist even was, ... after the war, it was the exact opposite: people wanted physicists everywhere.”* Mic Drop.
